Year 6

Term 2

Please remember to always have PE kits in school. Swimming will be on Fridays for Sri Lanka class.

We will be having a very frosty start to our cross curricular learning next term—we are going to learn about everything from the North to the South pole and all the fantastic parts in between!

Our topic work will be linked heavily to our reading around 'Shackleton's Journey' which is all about the exploration of the intrepid explorer: Ernest Shackleton. We will develop map skills, coordinates skills and learn about just how fantastic our world really is.

Maths

We will start term 2 going straight in to multiplication, division and fractions. This is always a tricky area but you can always help at home to support your children in their learning by saying your times tables together—this way they can apply these skills when working with tricky fractions.

Your child will continue to have weekly homework.

This will be issued on a Friday and due in the following Wednesday.

It is all part of getting them ready for their transition into secondary school.

Our science this term will be all about electricity. We will complete a big project linking this to the design process in DT.

English

As the weather turns colder, so will the text. We will be reading in class…….Shackleton's Journey!

Why not ask your child what they have found out about Antarctic exploration throughout the term. They will be learning lots of new and exciting vocabulary that they can also share with you!
